

Better Together: Next Generation ESG Reporting Capabilities with Inpher's XOR Platform & Oracle Cloud EPM

Today, legislators are globally ready to adopt proposals to increase sustainability reporting requirements. These regulatory changes are likely to have a significant impact on your organization in the coming years. Now, more than ever, your organization needs to be ready with a comprehensive solution for ESG reporting that provides transparency to all stakeholders and regulators while protecting sensitive data.

Every part of your organization will generate ESG data. Supply chain, human resources, ERP, and other operational systems all provide key data at different granularity and standards. It is imperative to collect, convert, standardize, and aggregate this data for a complete, consistent picture of your organization's ESG footprint.

Organizations worldwide are eager to demonstrate their ESG commitments and establish their credibility with stakeholders.

Oracle Cloud EPM and Inpher XOR Platform provide a comprehensive solution that allows you to securely plan, manage, and report on your ESG practices.

Additionally, the adoption of more robust privacy and data protection regulations, as well as higher consumer awareness and new secure artificial intelligence applications, have contributed to an evolving data landscape. Privacy enhancing technologies enable organizations to safely extract valuable insights on sensitive data distributed across data silos without ever exposing the data or moving it outside its owner's infrastructure.

ESG reporting is not simply about compliance; management needs a robust platform for analysis and insights to understand their current sustainability practices and adjust plans as necessary. Increasingly, organizations are leveraging artificial intelligence techniques like machine learning for ESG reporting to improve the quality and quantity of usable data and to analyze it more effectively. In today's environment of evolving ESG requirements, you need a solution that is connected, complete, and supports advanced analysis, in which the system design integrates technologies to protect the confidentiality and integrity of information.

Oracle's Cloud EPM provides a comprehensive solution that allows you to control, manage and distribute ESG enterprise data with built-in approval workflow, security, accountability, and audit capabilities:

- Standardize enterprise data definitions
- Adapt to new reporting mandates, frameworks and standards
- Improve decisions with built-in intelligence and advanced analytics

Inpher's XOR Platform powers federated analysis of sensitive data like that involved in ESG reporting with cryptographic security through the use of privacy-enhancing technologies:

- Conduct secure analysis on the cloud and high-low environments
- Support complex ML algorithms
- Prevent data re-identification
